Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1–25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26–160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

Abstract

Claytor, R. R., C. C. Mullins and R. A. Jones. 1991. Commercial Atlantic salmon catch for West Newfoundland and South Labrador, Gulf Region: Annual summaries 1974-1988 and weekly catches 1987-1988. Can. Data Rep. Fish. Aquat. Sci. No. 838. vii + 80 p.

Annual summaries of Atlantic salmon commercial catch and effort from 1974-1988 are presented for West Newfoundland and South Labrador, Gulf Region. Weekly catches for 1987-1988 have been summarized by Coastal Area, Statistical Section, Statistical Area, Salmon Fishing Area, and Gulf Region. Total commercial landings were 212 t in 1987 and 174 t in 1988 and were above the five-year mean, 143 t (1983-1987). Peak catches occurred in southern areas in weeks 25-26 and in northern areas in weeks 26-27.

Dans ce rapport, nous présentons un résumé des prises et de l'effort de pêche commerciale au saumon de l'Atlantique pour chaque année entre 1974 et 1988 inclusivement, à l'ouest de Terre-Neuve et au sud du Labrador, région du Golfe. Les prises hebdomadaires ont été réparties par zone côtière, par section statistique, par secteur statistique, par zone de pêche au saumon et pour l'ensemble de la région du Golfe. Au total, les pêcheurs commerciaux ont débarqué 212 t en 1987 et 174 t en 1988, soit plus que la moyenne des cinq ans (de 1983 à 1987), que s'établissait à 143 t. Les prises ont atteint leur sommet durant les semaines 25 et 26 dans les secteur sud et durant les semaines 26 et 27 dans les secteurs nord.

INTRODUCTION

This report summarizes Gulf Region commercial Atlantic salmon (Salmo salar) catch data for 1987 and 1988. Gulf Region commercial catch statistics for previous years may be found in May and Lear (1971), Lear (1973) Waldron (1974a,b), Reddin and Waldron (1976), Reddin and Day (1980), Moores and Dawe (1980), Reddin and Short (1981), Short and Reddin (1981a, 1981b), Moores et al. (1984), Ash (1984), and Ash and O'Connell (1986).

Information on catch-timing and mean weight of salmon caught in the commercial fishery has been used in the past to adjust season opening and closing dates with the intention of increasing spawning escapement (Claytor and Mullins 1990). In 1990, catch-timing and mean weights were used to set quotas and season openings in the Newfoundland fishery. The purpose of this report is to make the data available on catch-timing and mean weights more accessible to the fisheries managers, biologists, and fishermen that are involved in setting regulations for this fishery.

Commercial regulations in 1987 and 1988 were as follows: Salmon Fishing Area 12 remained closed (it has been closed since 1984), Salmon Fishing Area 13 was open from June 5-July 10, and Salmon Fishing Area 14 was open from June 5-October 15 (Fig. 1,2). Full-time fishermen were licensed for a maximum of 200 fathoms of gillnet. Minimum mesh sizes permitted in Salmon Fishing Area 13 were as follows: Cape Ray-Cape Anguille 127mm, Cape Anguille-Cape George 114mm, and Cape George-Cape St. Gregory 127mm. A minimum mesh size of 127mm was permitted in Salmon Fishing Area 14.

METHODS

The methods followed are essentially those of previous reports, (e.g. Ash and O'Connell 1986). Commercial landings were compiled from fish plant buyer's purchase slips and local sales recorded on supplementary "B" purchase slips from Protection and Regulations Branch field personnel.

Buyer purchase slips provide daily sales by individual fisherman to fish plants. The community nearest to the fisherman's berths is also recorded, so that catch can be determined for each community regardless of the location of the plant purchasing the salmon.

Supplementary "B" slips provide local sale estimates which include fish consumed by fishermen, given away, or sold directly to consumers. Local sales are estimated monthly for each community by fisheries officers responsible for a group of communities. These are generally based on an average of selected fishermen interviewed in each community.

Weights of salmon caught are reported by condition at point of sale. These conditions may be whole round, gutted head-on, gutted head-off, or salted. Over 99% of salmon sold in the Gulf Region in 1987 and 1988 were gutted head-on, with the remainder sold as salted. A conversion factor of 1.2 was used to convert gutted head-on to whole weight and 1.3 was used to convert salted to whole weight (Reddin and Short 1981).

Weights and numbers of fish reported on purchase slips or supplementary "B" slips are generally recorded by size (small <2.7 kg; large ≥2.7 kg) based on whole round weight. If catches have not been sized then weights are portioned into small and large categories as described below. If numbers are not indicated these are also estimated as described below.

License data is obtained from Resource Allocation Division and includes number of fishermen and net length in fathoms.

Monthly sale summaries are presented as the percentage of total weights (regardless of size) sold locally in each statistical unit.

Weekly commercial summaries

Weekly data has been summarized by standardized week (Table 1) by Coastal Area, Statistical Section, Statistical Area, Salmon Fishing Area, Gulf Insular Newfoundland, and Gulf West Newfoundland and South Labrador (Figs. 1,2; Tables 2,3). Data were first collated by community and then summed to obtain results for the above statistical units.

Weekly weights were readily obtained from buyer purchase slip data as sales to plants are recorded daily. Local sales, recorded by month, were converted to daily catches according to the proportion of daily catch for each month from each community as recorded by plant sales. If no plant sales were recorded from a community then daily local catches were portioned equally for all fishing days of the month.

The daily proportion of weights recorded as small and large salmon for each community were used to convert weights of salmon recorded as unsized into small or large categories. Previous reports had made the provision that if the total weight of sized salmon was less than 10% of the unsized catch, then the mean proportion of small and large salmon from the last five years was to be used to estimate size categories for unsized salmon. However, this situation did not occur for 1987 and 1988.

On some purchase slips weights but not numbers were recorded or numbers and weights recorded produced mean weights which did not fit the indicated size categories. Both of these situations required numbers to be estimated. For example, numbers were considered invalid if the mean weight of large salmon was <2.7 kg or the mean weight of small salmon was > 2.7 kg. Numbers of

salmon for these invalid entries and for those without numbers were estimated using mean weights by week for each community. Mean weights were calculated only from records with known numbers and weights that were considered valid. If the number of salmon in a size category was less than 50 then the number of salmon for that community and week was estimated using the mean for the Statistical Section or Statistical Area in which that community was located. Total numbers for each week were then calculated by adding known and estimated numbers.

Statistical Units

Commercial catch statistics from individual communities are combined into larger units consisting of several geographically related communities. These combinations allow fisheries with similar characteristics to be managed as a group. The first grouping level has been designated as Coastal Area and has not previously been used to describe salmon catches. Coastal Areas are combined into Statistical Sections and these into Statistical Areas and these into Salmon Fishing Areas (Figs. 1,2; Tables 2,3).

SUMMARY

The number of licensed gear units (50 fathom-length/unit) and licensed fishermen was similar in 1987 and 1988 but lower than in previous years (Tables 4,5). However, total commercial landings in 1987 (212 t) and 1988 (174 t) differed by 20% but were above the five year mean (143 t). The increased total landings were primarily attributable to larger than average small salmon catches in 1987 and 1988 (Tables 6,9). Peak catches occurred in southern areas in weeks 25-26, and northern areas in weeks 26-27 (Tables 10-15, 22-27). Most sales were to fish plants although local sales increased in the later part of each season (Tables 16-21, 28-33).

ACKNOWLEDGEMENTS

We thank all fisheries officers and plant buyer for the time and cooperation they extended to us in the collection and analysis of the data used.

[1] In 1984, seven licenses were issued before legislation to close the commercial fishery was passed.

[2] In 1985, one license was issued for section 39 because the fishermen lived in Port-aux-Basque but fished in SFA 13.

Table 5. Number of licensed commercial salmon fishermen by Statistical Area, for Gulf Region, West Newfoundland and South Labrador, 1984-1988. Number of licenses for 1975-1983 are provided in Ash and O'Connell 1986.
